WorksManager Release Notes

November 28, 2019

This WorksManager release includes these new features:

- Navigation Panel Updates for My Projects and My Accounts
- Device Description column was added to the Device list view
- My Projects Info Panel
- Moved Search box location

These feature enhancements:

• Small user interface updates

And fixes for these issues:

• Increased the speed that "My Projects" load in the Map View

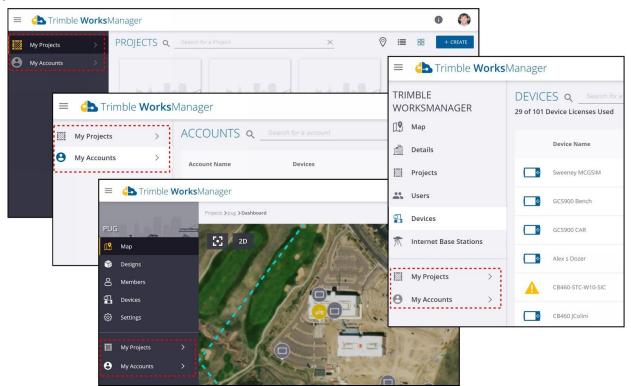

Navigation Panel Updates

Many users have been having trouble getting from their projects to their account pages. Changes have been made to the navigation panel on the left side of all page to improve access to these pages. We now let users link to MY PROJECTS and MY ACCOUNTS from all navigation

panels.

Device Description

Many users have requested we add the description field to the list view so this update has been made. Note that the Serial Number field has been removed from the list view. Users can still search on serial numbers.

My Projects Info Panel

An Info Panel has been added to the My Projects Map View so that users can select multiple projects on the map without being taken directly into each project. This lets users select a few different projects before selecting the View button to access the project.
