Technical Support Hotline	3				

C New & Improved

This WorksManager release includes these new features and enhancements:

View, and download Work orders

Earlier, users were able to view and download just the spj files (work order results) in the office with WorksManager, and not the entire work order content. Now, with this feature,

Users can view, and download the entire work order contents, that includes record (.txt), TaskLog (.txt), Instruction (.txt) etc. in addition to the results (.spj). Steps -

- 1. Login to WorksManager -> Navigate to project devices
- 2. Select any data collector -> Click 'Field Data (View)' from summary panel

3. View work orders for the device -> Multi select & download work orders

Here is a <u>quick demo</u> of the feature

This WorksManager release also includes fixes for reported or discovered cases in which:

Icon does not show up for Earthworks Soil Compactors

Issue description: Given an account with Earthworks devices, **when** machine type is Soil Compactor, **then**, WorksManager shows a default horizontal tablet icon instead of a Soil Compactor icon

Fix: The issue is fixed now - WorksManager shows the appropriate Soil Compactor asset icon in account devices page for a Soil Compactor machine

'Invalid project device' error occurs when users add/ remove devices for designs

Issue description: Given a project with > 100 devices, **when** user tries to add/ remove devices for a design **then**, WorksManager throws up 'Invalid project device'

Fix: The issue is fixed now - Users can add/ remove devices for designs on large projects

License status is empty for devices for large accounts

Issue description: Given an account with > 100 devices, **when** user scrolls down to the bottom of the account devices list **then**, WorksManager shows empty license status for devices

Fix: The issue is fixed now - WorksManager now shows the correct license status for devices of large accounts

Reaching Support, and the Community
