Sales and Product Information	5

Fixed

This Tilos release also includes fixes for reported or discovered cases in which:

Printing and Presentation

- You could not create a PDF file using the File > Create Presentations command; instead, you had to replace/add files on your computer by downloading and unpacking a SVG_to_PDF.zip file to an installation folder.

Community

- As a new user, trying to sign into community.trimble.com for the first time got an "Insufficient permissions" error. You could not create a community account with your Trimble Identity version 4 (TID4) credentials. Users who had community accounts prior to TID4 did not encounter this error.

Note: This was not a Tilos problem, but rather a community-wide issue that affected communities in Civil Construction, Geospatial, and Buildings.

Other

Known issues

- The Trimble Connect property set (PSET) feature prototype has stopped working and will not be fixed until a future version. If you wish to explore this prototyped Tilos - Connect integration, please contact Tilos Support.
- When using presentation mode for printing , if you try to preview multiple pages for which the zoom level is not 100%, using the Next/Previous page buttons can result in missing lines and/or empty pages. Any PDFs or SVGs that you generate are not affected by this issue. (TIL-1400)
- It is recommended that you do not use overlapping sector profiles in sector-based activity calculations; they are not working properly. (TIL-1231)
- When displaying some sector profiles in a distance scale, the result is not as expected. (TIL-1019)

- The speed calculation for one side of an activity can be incorrect when using sector-based speed calculations. The issue only arises when a task is in a positive direction. If task coordinates are changed, then the behavior is as expected. (TIL-1339)
- User-defined fields (UDFs) were not being added from Asta Powerproject 15 when using the Powerproject macro. Distance information was transferred properly (without formatting problems) from Powerproject 14, but from versions 15+. (TIL-1188) Therefore, Powerproject versions above 14 are not supported unless you deploy a Tilos fix for Asta Powerproject 15; to do so, see the [support note](#) in the [Tilos Community](#).
- When you try to print to PDFs larger than, e.g., 5 m, you may encounter an error message similar to: "The size of this page exceeds the permitted limits. Some content may not be displayed." Even though Tilos version 11.0 can print larger PDFs than earlier versions, all PDF read/write applications have a size limitation beyond our control.

Supported Languages

The Tilos program interface (UI) is available in these languages:

- Chinese (Mandarin, simplified)
- English (US)
- French
- German
- Italian
- Korean
- Polish
- Russian
- Spanish (Spain)
- Turkish

Note: Hungarian is no longer supported as a Tilos interface language.

It is possible to run more than one language edition on the same computer.

The Tilos program help is available in these languages:

- English (US)
- German

Reaching Sales, Support, and the Community
