

## Release Notes - Jun 10, 2020

---

Here is the WorksManager release notes as of June 10, 2020

### Features

#### Archive design

After some delays, the 'Archive design' feature is here :)

With this feature, you can

- Archive/ unarchive a specific design version
- View active/ archived design versions
- Archive/ unarchive an entire design along with all its versions
- View active/ archived designs
- WorksManager auto archive - When you edit a design, WorksManager will auto-archive all the older versions of the design except the last three.

[Here](#) is a quick video of the feature.

### Bugs

#### Multiple conflicting config files in TCC

Issue description:

**Given** a project exists in TCC with config files (like cal, avoid zone etc.),

**When** user creates the project in WorksManager, and uploads config files (like cal, avoid zone etc.) with a different name,

**Then**, TCC ended up having two files in the project folder - one, the already existing version, and two, the new version from WM

Fix: We fixed this issue. Now, WorksManager will archive the existing version already present in TCC, and place the new version uploaded via WorksManager. This will ensure the project has just one configuration file.

## Minor enhancements

### SCS900 firmware entitlement info.

Now, you can view the firmware version that an SCS900 device in the account is entitled for.

Navigate to Project -> SCS device -> summary panel

Note that while you can view both the current version and the entitled version for a Siteworks device, you can only view the entitled version for a legacy SCS900 device. We don't get the current version information from legacy data collectors.

### Civil Construction Software Communities and Resource Centers

[Here](#) you can find links to [WorksManager](#) and other Trimble Community resources.

Please refer to the COMING SOON TO WORKSMANAGER section on the [WorksManager Community](#) page to see what we are working on.
