New & Improved

This WorksOS release includes these new features and enhancements:

Import/Export

- **Import designs from Trimble WorksManager** - To complement new shared project functionality in WorksOS, you can now easily import existing designs from WorksManager to use when performing progress calculations directly within WorksOS. When you connect to the same project within WorksManager, you can see the most recent version of all the designs that exist within the shared project. This workflow will help if you routinely send surfaces and linework to your data collectors in the field.

See the demo video here: [WorksOS Tutorial - Import from WorksManager](#)

Note: Any/all edits to designs imported via WorksManager must be made within WorksManager.

Fixed

WorksOS also deployed fixes for reported or discovered cases in which:

- There are no fixes to report at this time.
- Also see **Known Issues** below.

Other

Known issues

- Back end performance improvements to dashboard loading and tile rendering is currently in development.

Supported Languages

The WorksOS program interface is available in these languages:

- Dutch
- English (American)
- French
- German
- Italian
- Japanese
- Norwegian
- Spanish

WorksOS program help and documentation is available in these languages:

- English (American)
